Z-AFM 4.9				
Nowy kod	Model	Rok produkcji	Opis	Cena detaliczna w USD
<b>Z-Fi Fuel Self Tuning Module</b>				
ZAFM49	ALL Z-Fi & Z-Fi TC	ALL	AIR/FUEL Z-AFM 4.9 SELF MAP KIT	\$390

Description: The optional Z-AFM kit consists of an air fuel sensor and amplifier box that plugs into any of the Z-Fi products, and allows for precise tuning of the motorcycle

NEW Z-AFM 4.9 Amplifier box is smaller, lighter, more rugged.  
- 20x faster processor speed & Improved product life  
- Enhanced signal processing for more accurate readings

NEW LSU 4.9 AFR Sensor is the latest development in AFR sensor technology.  
- Improved longevity & Increased accuracy

NEW Build better Fuel Maps. Makes you a Super Tuner!  
Plug & Play installation with any Bazzaz Z-Fi or Z-Fi TC.  
Optimal fuel mapping without time or cost of dyno tune.

E143	Streetfighter	10-11	AFR Signal Stabilizer	\$130
E143	DIAVEL	11-14	AFR Signal Stabilizer	\$130

**Description:** A simple plug-and-play application. The Bazzaz Signal Stabilizer for Ducati allows you to tune the bike throughout the entire RPM & Throttle position range. The Ducati Signal Stabilizer allows the removal of the stock O2 sensor without triggering the "FI" fault light on the dash. It also stabilizes the AFR (fuel delivery) which would otherwise become very unstable without the sensor or Bazzaz eliminator installed. If the Bazzaz Signal Stabilizer is not used when the stock sensor is removed, the stock ECU will lean out the bike, which results in poor performance and also may harm the engine. In addition, the Bazzaz Signal Stabilizer can be used with any brand of engine management system, which typically do not allow for fuel map adjustments within the following range of operation: 0-20% throttle and 0-6000RPM.

<b>Secondary Air Valve Eliminator</b>				
E560	CBR954RR	02-03	Secondary Air Valve Eliminator	\$26
E560	All KTM LC8 Motor		Secondary Air Valve Eliminator	\$26
E560	ST1300	02-12	Secondary Air Valve Eliminator	\$26
E1560	TRIUMPH	06-12	Secondary Air Valve Eliminator	\$26

**Description:** Secondary Air Valve Eliminator (Pair Valve Eliminator). Makes for a more stable AFR, which results in a better overall tune of the motor.

Bazzaz has created alternative to the standard Yoshimura EMPro quick shift option.

Until now Racers using the Yoshimura Race Kit ECU (EMPro) or Kit ECU/ Kit Race Harness combination were advised by Yoshimura to use the stock side stand switch to trigger the Race ECU to cut the bike's power allowing for clutchless up-shifts. This method is an effective solution but unpopular with many of today's racers who often chose to fit a switch designed specifically for this purpose by other aftermarket manufactures such as Bazzaz, etc.... These racers previously had to figure out on their own how to wire these components from two different manufactures, which many found difficult.

Now Bazzaz has created a sub harness that replaces the Yoshimura " Ignition Short Harness," which is a communication harness required to communicate with the EMPro ECU. The Bazzaz harness allows the user to not only communicate with the EMPro ECU but also provides connections for the pit speed limiter and Bazzaz shift switch. A really convenient option for racers. Before users had to purchase and install a Race harness for their entire motorcycle in order to take advantage of the quick shift and pit speed limit functions of the ECU. The only other alternative to purchasing the Race harness at an additional cost was for racers to create their own wiring solutions to enable these much desired functions ( which no how to guide exists making it to complex a task for the average racer).

The Bazzaz kit will come with the following:

Communication Harness which contains connectors to interface with the diagnostic and communication connectors on the stock Suzuki harness, shift switch and pit speed limiter connectors

Ignition Switch Jumper which eliminates the light functions other than the head light low beam of the switch. ( This does not eliminate to Ignition switch)

Bazzaz Shift Switch & Rod which is designed to connect with the Bazzaz to EMPro harness only ( Not Bazzaz Z-FIQS, Z-FITC or QS4USB )

The type of connector used on the Bazzaz EMPro shift switch is similar to the connectors used on the Yoshimura Race harnesses. This allows those racers who purchased the full bike race harness previously but now would like to upgrade and use the Bazzaz shift switch can opt to purchase just the Shift switch and rod from Bazzaz. These racers would not need the Bazzaz/ EMPro harness due to the fact that their race harness from Yoshimura enables all the desired functions just with an inferior shift switch. This is a yet another option making the transition over to Bazzaz shifters more convenient for racers.
